The diagram illustrates a network topology. A central router is connected to three main components: a Windows box (Win) with IP 50.0.0.10, a datacenter (Net) containing two servers (Linux-1 with IP 172.16.0.10 labeled HOTSTAR and WinServer with IP 172.16.0.20 labeled NETFLIX), and a DNS server with IP 8.8.8.8. The router's interfaces are labeled: e0/0 (172.16.0.1) connected to the datacenter, e0/1 (8.0.0.1) connected to the DNS server, and e0/2 (50.0.0.1) connected to the Win box. The datacenter is enclosed in a dashed green box, and the DNS server is enclosed in a dashed green circle.

A screenshot of a QEMU window titled "QEMU (Linux-1)". The window has a standard Linux desktop environment with a taskbar at the top containing icons for a file manager, terminal, settings, and other applications. The main area of the window is a black terminal with white text. The text shows network configuration settings for an interface named "eth0". The settings include: ENABLE=yes, NAME=Ethernet, IPADDRESS=172.16.0.10, CIDRLEN=16, NETWORK=172.16.0.0, NETMASK=255.255.0.0, GATEWAY=172.16.0.1, BROADCAST=172.16.255.255, and DHCP=no. At the bottom of the terminal, there is a prompt "I /etc/sysconfig/network-scripts/ifcfg-eth0 [Modified] 10/33 30%".

```
QEMU (Linux-1)
ENABLE=yes
NAME=Ethernet
IPADDRESS=172.16.0.10
CIDRLEN=16
NETWORK=172.16.0.0
NETMASK=255.255.0.0
GATEWAY=172.16.0.1
BROADCAST=172.16.255.255
DHCP=no

I /etc/sysconfig/network-scripts/ifcfg-eth0 [Modified] 10/33 30%
```
